GEOxyz Group Launch New UK HQ for Offshore Geophysical, Geotechnical and ROV Survey headed By Sarah Cashmore

GEOxyz, founded by Patrick Reyntjens in 1999, has developed into one of Europe's leading survey companies employing over 110 people across five European bases. GEOxyz owns and operates 16 vessels as well as an extensive range of seabed mapping and sampling equipment, which is deployable across their vessel, ROV, drone and surface mapping platforms. In recent years GEOxyz has successfully moved into the offshore markets with the purchase of dedicated vessels and utilising vessels of opportunity.

The new UK base will be focused on global Oil and Gas exploration and maintenance in addition to home markets.

Sarah Cashmore, who launched her career as an offshore Geophysicist at Gardline in 1996, has held senior positions at UTEC Survey, RPS Energy and most recently as Operations Director at Calecore and Survey Manager at Alcatel Submarine Networks.

Sarah has a deep understanding of offshore site investigation; data integration and reporting and delivering complex and logistically challenging survey campaigns across the globe most notably in Africa, Greenland, Norwegian Arctic and the Kara Sea.

"With our market in one of its most challenging periods, I am looking forward to providing clients with innovative solutions, based on our proven track record, extensive fleet of vessels and state-of-the-art equipment. GEOxyz teams are highly motivated professionals all focused on safely getting the best quality data for their clients," said Sarah.

"I am pleased that Sarah will be joining our group as General Manager of our UK base in Norwich. Sarah has a huge amount of experience that I believe will fit well with the GEO Group of companies. We are looking forward to supporting Sarah and our renewed focus on offshore site investigation," added Patrick Reyntjens.

Sarah can be reached at sarah@geoxyzoffshore.com starting 14 June 2016 or on +44 1603 856536

About GEOxyz Offshore.

GEOxyz Offshore, is a UK based Offshore Survey Company, specialising in Geophysical, Geotechnical and ROV Site Investigation. GEOxyz Offshore Mission and Vision

MISSION

GEOxyz Offshore's mission is to create value for our client's international projects based on enhanced data acquisition in the "on and offshore" environments, combining state of the art equipment, people and in-house solution capability.

VISION

GEOxyz Offshore's vision is to provide innovative solutions and tools to support the increasing demand in high level data acquisition and processing for our "on and offshore" client base. GEOxyz will become the reference and full service supplier in this high standard market through a strong focus on quality and brand awareness.
